

FOR IMMEDIATE RELEASE

MaxxLife Crude Oil Butterfly Valves.

Bulk Tank Inc. announced an addition to their line of MaxxLife Butterfly Valves. The MaxxLife Crude Oil valve has all the great features of the standard MaxxLife valve: stronger, lighter weight, corrosion and abrasion resistant, extendable neck, one piece direct drive stem to disc connection, no external hardware on their ductile version, and quad o-rings instead of bushings, just to name a few. The crude oil version offers a specially formulated red Buna-N valve seat which will stay resilient at hot AND cold temperatures. As with the standard version of the MaxxLife, this valve has 30% more flow than the nearest competitor's valve. Machined standard with a TTMA bolt pattern and, as with all of BTI's products, it's 100% American made.

BTI's MaxxLife Crude Oil Butterfly Valve is available in a standard 4 inch size; other sizes are available, consult BTI for more information and availability. This valve is another exciting example of BTI's innovative product design, and is proudly and completely made in the U.S.A., including all materials and labor. As with all of its products, Bulk Tank, Inc. unconditionally guarantees this butterfly valve will outperform any similar products on the market today. For more information, call 1-800-841-5524 (573-518-0600) or visit www.bulktankinc.com.
