

BTI announces new sizes for their Ultra-Lightweight, Low Profile, Stainless Steel Sanitary Hopper Tees

Bulk Tank Inc. is set to manufacture a 6-inch straight and 5-inch bottom drop version of their ultra-lightweight, low profile, hopper tee cast of sanitary grade stainless steel that is close to the weight of cast aluminum. The addition of these two sizes rounds out their ultra-lightweight, low profile line.

The design of the tee allows for maximum strength, faster unloading and lighter weight than any stainless steel tee on the market today. These tees are 100% American made which is important in maintaining the integrity of food grade sanitary stainless steel.

Available in 5-inch or 6-inch, straight or bottom drop, these tees take advantage of BTI's SiphonFlow technology, which uses 2 forces instead of 1. With SiphonFlow, the product is pushed out of the tank with tank pressure and also pulled out of the tank with line pressure. The unique fluted design causes a venturi effect resulting in the "pulling" of product from the hopper allowing product to be unloaded faster than any tee on the market.

These tees are another exciting example of BTI's innovative product design and, as with all of its products, Bulk Tank, Inc. unconditionally guarantees this tee will outperform any similar product on the market today.
