

FOR IMMEDIATE RELEASE

Reduce Noise and Heat Build-Up with B.T.I.'s Longer Lasting Spin Flow Filter System

Park Hills, Missouri, March 21, 2011—Another industry dilemma means another innovative solution from Bulk Tank, Inc. The new B.T.I. Spin Flow Filter System reduces blower noise with a built-in silencer that won't cause turbulence or generate heat build-up in the airflow. The Spin Flow Filter System evenly distributes pressure by spinning incoming airflow and utilizing the entire filter element, helping your elements last longer at a cost comparable to any other pneumatic trailer air filter on the market.

Air enters the B.T.I. Spin Flow Filter System through a 4-inch to 6-inch bell housing, which accommodates a built-in resonating chamber that reduces blower noise compared to current air filters on the market today. The space provided by the bell housing allows the inclusion of the built-in silencer without constricting airflow, as the inner diameter of the housing matches the 4-inch inlet. This allows air to flow freely and won't generate heat build-up or turbulence. The built-in silencer eliminates the need to purchase filters and silencers separately, and is included at no additional cost. The B.T.I. Spin Flow Filter System saves money by doing the work of both a filter and a silencer.

The casting of the B.T.I. Spin Flow Filter System's air inlet causes a spiraling airflow that moves up and around the filter element in a non-turbulent fashion. As a result, the airflow uses more of the filter element, reducing noise and pressure drop and increasing the lifespan of the unit, cutting the cost and frequency of replacements. The filter elements are interchangeable with Sure Seal, Pneu Clean and ZC units.

The B.T.I. Spin Flow Filter System assembly uses a single cam lever lid, which keeps the number of parts and need for adjustments to a minimum and allows for easy cleaning. When closed, a spring-and-plate sealing mechanism applies even pressure to the filter element.

With a revolutionary airflow system, as well as a built-in silencer at no additional cost, the Spin Flow Filter System demonstrates B.T.I.'s superior product design. As with all of its products, Bulk Tank, Inc. unconditionally guarantees this filter system will outperform any similar products on the market today.
