

**FOR IMMEDIATE RELEASE**

**Unique B.T.I. SiphonFlow™ Hopper Tee Now in Four New Sizes**

*Park Hills, Missouri, June 10, 2010*—Bulk Tank Inc., well known for developing uniquely designed hopper tees that result in greater efficiency with a lower price, has again responded to consumer demand by adding four new sizes to its popular line of trouble-free SiphonFlow™ Hopper Tees.

The SiphonFlow™ Low Profile Straight Aluminum Tee is now available in 6" x 5", while the SiphonFlow™ Bottom-Drop line has been expanded with three new sizes: 8" x 4" Aluminum, 6" x 5" Aluminum, and 6" x 5" Abrasion Resistant Steel

All of B.T.I.'s SiphonFlow™ Hopper Tees include innovative design features that reduce fuel consumption and operating costs while increasing unloading rates and productivity. The unique fluted design of the SiphonFlow™ Tee creates a venturi effect as tank pressure pushes product out of the tank while line pressure simultaneously pulls product through. With the SiphonFlow™ Tee product is in the horizontal pipe the minute it leaves the hopper valve. Eliminating downstream radius on the tee reduces flow turbulence, friction and heat generation. This unique push-pull concept eliminates frustration, while enhancing productivity and service life. These tees last longer, work harder, and cost less.

Bulk Tank Inc.'s BT-810-A SiphonFlow™ Aluminum Bottom Drop Tee was designed with a large eight-inch top opening to accommodate large aggregate items, such as pebbles and gravel. Unlike other brands, the SiphonFlow™ Bottom Drop Tee does not require equalized pressure and numerous adjustments to achieve a tight seal on closing. Rather, it utilizes a replaceable molded gasket to ensure a consistent seal every time the door cams shut, with no adjustments required and is an astounding 12 pounds or 41% lighter with over an additional 1 ½" of ground clearance.

The new 8" x 4" and 6" x 5" are available in lightweight aluminum along with the original 5"x 4" and 6"x 4" models. The SiphonFlow™ Aluminum Bottom Drop Tee is up to 7 pounds lighter—40% lighter than other models available on the market with the new 8" X 4" an astounding 12 pounds lighter. Yet they are guaranteed to last longer than any other available model. These bottom drop tees also have more ground clearance than any other tee on the market with 1.5
