

FOR IMMEDIATE RELEASE

**Duralron™ Abrasion Resistant Low Profile Hopper Tees  
Optimum ground clearance; supreme abrasion resistance.**

Park Hills, Missouri, January 2, 2012 – Bulk Tank Inc., announced today a line of low profile hopper tees that offer extreme wear resistance in highly abrasive situations. American made and casted from Duralron™, a special iron alloy, these tees are projected to provide twice the wear resistance as standard abrasion resistant tees and the most ground clearance on the market today.

Duralron is the same iron alloy BTI uses in their popular SandHog tees, a tee designed for the frac sand industry. “Due to the success of the SandHog tee, the Duralron low profile line was a natural extension. Duralron is far and away a superior alloy and is getting rave reviews from the frac sand industry.” said Dave Sisk, president of BTI.

Completely made in the U.S.A., the Duralron low profile tees are available in 5x4, 6x4 and 6x5 sizes and in straight or easy to open bottom drop configurations. The low profile version of the bottom drop tee has all the features and ease of use characteristics as the standard bottom drop tee. As with all of its products, Bulk Tank, Inc. unconditionally guarantee these tees will outperform any similar products on the market today.
