

# Enhance Food Safety with the Critter Stopper™

**Bulk Tank, Inc.** solves yet another problem that has plagued the dry bulk food transportation industry for years. The **Critter Stopper™** valve eliminates small rodent and insect contamination

through the blow-down exhaust pipe. Air gets out, but nothing gets in! The **Critter Stopper** attaches to the end of the blow-down line and allows the air pressure in the tank to be emptied after the unloading process while not allowing anything to enter through the blow-down line. The **Critter Stopper** is made of lightweight aluminum and food grade stainless steel and will be available later this year in two sizes: 3" and 4". Patent pending.
