BULK TANK INC. ANNOUNCES TWO INNOVATIVE TECHNOLOGIES IN MANHOLE ASSEMBLIES

March 26, 2020, Park Hills, MO – Bulk Tank Inc. (BTI) announces the release of their Ultra-Light Never-Seize Manhole Assembly. The Ultra-Light Never-Seize Manhole Assembly reduces product contamination, reduces transport costs, and comes with a 10-year warranty.

The engineers of BTI have designed the Ultra-Light Never-Seize Manhole Assembly with a self-aligning lid gasket and redesigned lid to solve a leading issue with old-style assemblies that use the metal on the lid to align to the collar, allowing metal shavings to end up in your load from metal-to-metal contact when the lid is closed. This new design reduces product contamination which in-turn saves money and reduces costs.

The new assembly is up to 21 pounds lighter allowing a trailer to increase its product storage. With using BTI's light-weight parts, an annual increase in revenue per trailer making three hauls per day is nearly \$1,000.

"We are constantly enhancing our technology and product lines to save the industry both time and money," stated Andy Boyer, BTI President. "We know the importance of making each haul be as cost effective as possible. With our Ultra-Light products, our clients can save money, product, and time."

According to BTI, the Never-Seize adjuster will be available in Stainless Steel and feature internal adjustment threads with an o-ring seal and a built-in scraper to remove product build-up.

100% American-made, the BTI Ultra-Light Never-Seize Manhole Assembly will be available for shipment late summer 2020, and the Never-Seize Adjusters are available now.
