

One of these aerator rubbers is brand new, the other has over 1500 loads under its belt.

It's hard to tell.

Here's a clue, we left a little lime on it for you.

When our customer called us to say he just pulled off some aerator rubbers and wanted us to see the results we jumped at the chance to verify what we already knew; these aerator rubbers are a superior product.

Still can't tell, the new aerator rubber is on top.

Our SpinFlow™ Aerator rubbers are just another way that BTI products fulfill our brand promise - Lasts Longer. Works Better. Costs Less. We're so sure that it's the best value on the market we guarantee them for 2 1/2 years or 2500 loads.

So whether you need an aerator assembly or just replacement rubbers, we've got you covered.

New

After 1500 loads

SpinFlow
AERATION SYSTEM

The faster you can unload your hopper, the more money you save on labor and fuel costs, and the more loads you can haul in a limited amount of time. Bulk Tank's innovative designed components increase the pressure, velocity, and energy during aeration allowing for faster unloading. That's why Bulk Tank's new SpinFlow aerators reduces unloading times up to 20%. Frustrating and time consuming problems such as back flushing and rat holing of difficult material are no match for SpinFlow's

helical symmetrical design of the aerator stem. Engineered for a positive shut-off on the hopper wall, back flush is effectively prevented, every time. The aerator rubber is designed to eliminate contamination, last longer, and will not prematurely fail due to cracking and splitting. No need to waste money on replacement parts. Faster, stronger, and more economical, the SpinFlow aerator is putting a new spin on an old stand-by.
